

WESTWATER

PRODUCT PROFILE

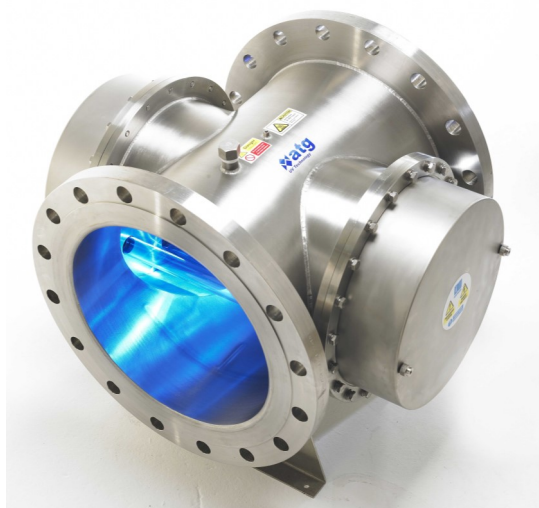

Validated UV Disinfection

WestWater / ATG UV Technologies

We are the experts in UV disinfection and water treatment. ATG UV Technology is a leading manufacturer of UV disinfection systems and packages for a range of industries, including municipal, industrial, petrochemical and aquatics.

Ultraviolet light is a highly effective, chemical free disinfection solution. Unlike chemical biocides, no known microorganism has demonstrated any immunity to UV light.

Using the test protocols developed by the US EPA Ultraviolet Disinfection Guidance Manual (Long Term 2 Enhanced Surface Water Treatment Rule), ATG UV Technology systems are rigorously biometrically validated using live surrogate microorganisms (MS2). This provides guaranteed UV disinfection performance against Cryptosporidium, Adenovirus and other harmful waterborne microorganisms.

UV Applications:

- Drinking water
- Waste water and water reuse
- Aquatics and swimming pools
- Food and beverage
- Mining, oil and gas
- Aquaculture
- Horticulture
- Industrial and process water
- Pharmaceuticals and ultrapure
- Marine and cruise ships
